

Taiwan

RISK & COMPLIANCE REPORT

DATE: January 2017

Executive Summary - Taiwan

Sanctions:	None
FAFT list of AML Deficient Countries	No
Higher Risk Areas:	Weakness in Government Legislation to combat Money Laundering Not on EU White list equivalent jurisdictions
Medium Risk Areas:	US Dept of State Money Laundering assessment Compliance with FATF 40 + 9 Recommendations Failed States Index (Political Issues)(Average Score)

Major Investment Areas:

Agriculture - products:

rice, vegetables, fruit, tea, flowers; pigs, poultry; fish

Industries:

electronics, communications and information technology products, petroleum refining, armaments, chemicals, textiles, iron and steel, machinery, cement, food processing, vehicles, consumer products, pharmaceuticals

Exports - commodities:

electronics, flat panels, machinery; metals; textiles, plastics, chemicals; optical, photographic, measuring, and medical instruments

Exports - partners:

China 27.1%, Hong Kong 13.2%, US 10.3%, Japan 6.4%, Singapore 4.4% (2012 est.)

Imports - commodities:

electronics, machinery, crude petroleum, precision instruments, organic chemicals, metals

Imports - partners:

Japan 17.6%, China 16.1%, US 9.5% (2012 est.)

Investment Restrictions:

Taiwan maintains a "negative" list of industries closed to foreign investment for security and environmental protection reasons, including public utilities, power distribution, natural gas, postal service, telecommunications, mass media firms, and air and sea transportation. These account for less than one percent of manufacturing categories and less than five percent of service industries. Railway transport, freight transport by small trucks, pesticide manufacture, real estate development, brokerage, leasing, and trading are all open to foreign investment.

While most foreign ownership limits have been removed, the foreign ownership limit on wireless and fixed line telecommunications firms is 60%, including a direct foreign investment limit of 49%. State-owned Chunghwa Telecom Co., which controls 97% of the fixed line telecom market, maintains a 55% limit on indirect foreign investment and a 49% limit on direct foreign investment. There is a 20% limit on foreign direct investment in cable television broadcast services, but foreign ownership of up to 60% is allowed through indirect investment via a Taiwan entity. Foreign investors control one of the five largest cable TV networks in Taiwan. In addition, there is a foreign ownership limit of 49.99% for satellite television broadcasting services and piped distribution of natural gas, and a 49% limit for high-speed railways. The foreign ownership cap on ground-handling firms, air-catering companies, aviation transportation businesses (airlines), and general aviation business (commercial helicopters and business jet planes) is less than 50%, with a separate limit of 25% for any single foreign investor. For Taiwan-flagged merchant ships, foreign investment is limited to 50% for Taiwan shipping companies operating international routes.

Taiwan has been gradually relaxing restrictions on investments from the People's Republic of China (PRC, or "mainland" China) as cross-strait relations have improved. Since 2009, Taiwan has eased restrictions on investments from mainland China in three stages. Most of Taiwan's manufacturing industry and half of its services and public construction sectors are now open to mainland investment. However, due to restrictions limiting percentage of ownership, and restrictions on mainland investors' participation in Taiwan business operations, investment liberalization to date has not drawn significant interest from mainland investors. Taiwan is planning the fourth stage of investment liberalization, expected in early 2013, and progressing towards the goal of normalization of cross-strait investment ties through a negative list to be developed in the near future.

In 2009, Taiwan launched the first phase of opening up to Chinese investment. Under the new policy, "Regulations Governing Permission for People from the Mainland Area to Invest in Taiwan," Taiwan has opened 64 sectors in manufacturing, 117 in services, and 11 in public construction. In order to own shares in a Taiwan company or establish a presence in Taiwan, mainland entities and foreign companies in which mainland entities have over 30% shares must first obtain permission from the interagency Investment Commission (IC) housed in the Ministry of Economic Affairs (MOEA). The Taiwan authorities may also prohibit or restrict investment from mainland Chinese enterprises that: (1) have military shareholders or have a military purpose; (2) would create a monopoly; (3) would threaten national security, or; (4) would negatively impact domestic economic development.

In the second round of investment liberalization, Taiwan announced in 2011 an additional 42 categories, including 25 sectors in manufacturing, eight in services and nine in public infrastructure, which would be open for investment from mainland China. The manufacturing categories include medical devices, machinery for making metal products, and petrochemicals. In March 2012, Taiwan announced a third tranche of relaxed restrictions on mainland investments. As a result, Taiwan has opened more than two-thirds of Taiwan's aggregate industrial categories, excluding agriculture, to PRC investors, with manufacturing topping the list, in which 97 percent of the sector is now opened to Chinese capital. In the public construction and service sectors, investment opened to PRC investors expanded to 51 percent. Mainland Chinese investors, however, continue to be prohibited from serving as a Taiwan company's CEO, although a mainland Chinese board member may retain management control rights of a Taiwan company.

Reports indicate that in the fourth round of liberalization of Chinese investment in Taiwan, MOEA plans to remove prohibitions on Chinese ownership of controlling stakes in seven key industries, including the light emitting diode (LED), integrated circuit assemblies, semiconductor manufacturing equipment, semiconductor packaging and testing, metal cutting tool machines, and solar batteries. MOEA proposes to impose a shareholding ceiling of 50 percent for Chinese investment in companies in these industries, and retain the mechanism for screening investment applications on a case-by-case basis. The MOEA proposal is subject to the Executive Yuan's (EY) final approval.

Section 1 - Background

In 1895, military defeat forced China's Qing Dynasty to cede Taiwan to Japan. Taiwan came under Chinese Nationalist control after World War II. Following the communist victory on the mainland in 1949, 2 million Nationalists fled to Taiwan and established a government using the 1947 constitution drawn up for all of China. Beginning in the 1950s, the ruling authorities gradually democratized and incorporated the local population within the governing structure. This process expanded rapidly in the 1980s. In 2000, Taiwan underwent its first peaceful transfer of power from the Nationalist to the Democratic Progressive Party. Throughout this period, the island prospered and became one of East Asia's economic "Tigers." The dominant political issues continue to be the relationship between Taiwan and China - specifically the question of Taiwan's eventual status - as well as domestic political and economic reform.

Section 2 - Anti – Money Laundering / Terrorist Financing

FATF status

Taiwan is not on the FATF List of Countries that have been identified as having strategic AML deficiencies

Compliance with FATF Recommendations

The last Mutual Evaluation Report relating to the implementation of anti-money laundering and counter-terrorist financing standards in Taiwan was undertaken by the Financial Action Task Force (FATF) in 2007. According to that Evaluation, Taiwan was deemed Compliant for 7 and Largely Compliant for 18 of the FATF 40 + 9 Recommendations. It was Partially Compliant or Non-Compliant for all 6 of the Core Recommendations.

Key Findings from latest Mutual Evaluation Report (2007):

There is a strong focus on anti money laundering (AML) measures, but less emphasis on measures to combat the financing of terrorism (CFT) – evidenced primarily by the fact that terrorist financing is not yet criminalized.

The statistics provided reflect an increasing number of money laundering prosecutions with the number increasing each year for the last 4 years.

Drug seizures indicate a lucrative trade in illicit drugs in Taiwan. This is of some concern, given a lack of ML prosecutions arising from narcotics investigations.

Taiwan has various authorities that supervise the banking, insurance, futures and securities industries. The supervisory authority of the financial industry and creation of a single financial regulator (the Financial Supervisory Commission) was achieved through legislation that became effective in July 2004.

Taiwan had an established banking industry with assets of NT\$36,970.7 billion (USD 1,105.4 billion).

The Insurance industry has 24 non-life and 30 life insurance companies with premium income of USD 3,543 million and USD 43,474 million respectively.

In respect of the DNFBPs in Taiwan, casinos are outlawed; real estate (in 2004) recorded 727,537 transactions in land and 418,187 transactions in housing; jewellery shops play a major substitute role of financial institutions and exchange large amounts of money to foreign currency in addition to dealing in gems and gold; lawyers have broad scope of business and notaries exist in civil practice as well as within the court system; accountants number 2,398

(as at December 2005); all trust business is conducted by banks and as at December 2005 was USD 85.5 billion in size.

US Department of State Money Laundering assessment (INCSR)

No longer categorised a Jurisdiction of Primary Concern however the 2017 Report has not yet been published and, therefore, below is the 2016 report.

Taiwan was deemed a Jurisdiction of Primary Concern by the US Department of State 2016 International Narcotics Control Strategy Report (INCSR).

Key Findings from the report are as follows: -

Perceived Risks:

Taiwan's modern financial sector, strategic location within the Asia-Pacific international shipping lanes, expertise in high-technology production, and role as an international trade hub make it vulnerable to transnational crimes, including money laundering, drug trafficking, telecom fraud, and trade fraud. Domestic money laundering is generally related to tax evasion, drug trafficking, public corruption, and a range of economic crimes.

Official channels exist to remit funds, which greatly reduce the demand for unofficial remittance systems; however, although illegal in Taiwan, a large volume of informal financial activity takes place through unregulated, and possibly organized crime-linked, non-bank channels. Taiwan has five free trade zones and a growing offshore banking sector, which are regulated by Taiwan's Central Bank and the Financial Supervisory Commission. There is no significant black market for smuggled goods in Taiwan.

Do financial institutions engage in currency transactions related to international narcotics trafficking that include significant amounts of US currency; currency derived from illegal sales in the U.S.; or illegal drug sales that otherwise significantly affect the U.S.: NO

Criminalization of money laundering:

"All serious crimes" approach or "list" approach to predicate crimes: Combination approach

Are legal persons covered: criminally: YES ***civilly:*** NO

Know-your-customer (KYC) rules:

Enhanced due diligence procedures for PEPs: Foreign: YES ***Domestic:*** YES

KYC covered entities: Banks; trust and investment corporations; credit cooperative associations; credit departments of farmers' and fishermen's associations; Agricultural Bank of Taiwan; postal service institutions that also handle financial transactions; negotiable instrument finance corporations; credit card companies; insurance companies, agents, and brokers; securities brokers; securities investment and trust enterprises; securities finance

enterprises and investment consulting enterprises; securities central depositories; futures brokers; trust enterprises; retail jewelers; and third party payment service businesses

REPORTING REQUIREMENTS:

Number of STRs received and time frame: 6,890: January - October 2015

Number of CTRs received and time frame: 4,107,745: January - October 2015

STR covered entities: Banks; trust and investment corporations; credit cooperative associations; credit departments of farmers' and fishermen's associations; Agricultural Bank of Taiwan; postal service institutions that also handle financial transactions; negotiable instrument finance corporations; credit card companies; insurance companies, agents, and brokers; securities brokers; securities investment and trust enterprises; securities finance enterprises and investment consulting enterprises; securities central depositories; futures brokers; trust enterprises; retail jewelers; and third party payment service businesses

money laundering criminal Prosecutions/convictions:

Prosecutions: 68: January - October 2015

Convictions: 7: January - October 2015

Records exchange mechanism:

With U.S.: MLAT: NO **Other mechanism:** YES

With other governments/jurisdictions: YES

Taiwan is a member of the Asia/Pacific Group on Money Laundering (APG), a FATF-style regional body.

Enforcement and implementation issues and comments:

Taiwan is not yet in full compliance with international standards. While Taiwan criminalizes the financing of terrorist activities, it is not an autonomous offense. There are also significant gaps in Taiwan's asset freezing regime and implementation of UNSCRs 1267 and 1373; deficiencies in customer due diligence (CDD) regulations, including in identifying and verifying customer identity; and the threshold for a serious money laundering offense is too high. The Money Laundering Control Act (MLCA) does not specifically provide for the civil coverage of legal persons. Furthermore, Taiwan's AML/CFT requirements do not apply to several types of designated non-financial businesses and professions (DNFBPs), which remain vulnerable to money laundering and terrorism financing activity.

The responsible agency governing jewelry stores is the Department of Commerce within the Ministry of Economic Affairs, and it is unclear if this department has the capacity to audit jewelry stores. The authorities are not keeping statistics on jewelry store-related money laundering cases.

In 2014, Taiwan assisted U.S. law enforcement authorities and agreed to freeze a bank account containing nearly \$16 million in illicit proceeds tied to a trade-based money laundering scheme in Los Angeles involving Mexican drug cartels and the importation of

garments and textiles into the United States. It was the first time Taiwan had facilitated a significant asset seizure as part of a U.S.-based criminal investigation.

The United States and Taiwan, through their respective legal representatives, are parties to the Agreement on Mutual Legal Assistance in Criminal Matters Between the American Institute in Taiwan and the Taipei Economic and Cultural Representative Office in the United States. There is no extradition treaty in force between Taiwan and the United States. Taiwan is unable to ratify conventions under the auspices of the UN because it is not a UN member. However, it has enacted domestic legislation to implement the standards in the 1988 UN Drug Convention, the UN Convention against Transnational Organized Crime, and the UN Convention for the Suppression of the Financing of Terrorism.

Taiwan should pass legislation to criminalize the financing of terrorism as an autonomous crime, clarify that the law covers terrorism-related activities conducted overseas, establish procedures to allow the freezing of terrorist assets without delay, and continue to address CDD concerns. Taiwan should exert more authority over non-profit organizations and should raise awareness of the vulnerabilities to terrorism financing of this sector. Taiwan should take steps to amend its legislation and regulations to bring all DNFBPs and the non-profit sector within the scope of its AML/CFT coverage. Proposed legislative amendments to Taiwan's MLCA address a number of these deficiencies, but remain only in draft form.

Current Weaknesses in Government Legislation (2013 INCRS Comparative Tables):

According to the US State Department, Taiwan does not conform with regard to the following government legislation: -

Ability to freeze assets without delay - The government has an independent national system and mechanism for freezing terrorist assets in a timely manner (including but not limited to bank accounts, other financial assets, airplanes, autos, residences, and/or other property belonging to terrorists or terrorist organizations)

States Party to UN 1988 Convention - States parties to the 1988 United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances, or a territorial entity to which the application of the Convention has been extended by a party to the Convention.

International Terrorism Financing Convention - States parties to the International Convention for the Suppression of the Financing of Terrorism, or a territorial entity to which the application of the Convention has been extended by a party to the Convention.

States Party to United Nations Transnational Organised Crime Convention - States party to the United Nations Convention against Transnational Organized Crime (UNTOC), or a territorial entity to which the application of the Convention has been extended by a party to the Convention.

States Party to United Nations Convention Against Corruption - States party to the United Nations Convention against Corruption (UNCAC), or a territorial entity to which the application of the Convention has been extended by a party to the Convention.

Offshore Financial Centre

Taiwan is not considered to be an Offshore Financial Centre

US State Dept Narcotics Report 2014 (introduction):

Taiwan is neither a major producer of nor a significant transshipment point for illicit narcotics. Continued aggressive law enforcement action targeting domestic production, coupled with enhanced surveillance of smuggling routes, decreased the availability of illicit drugs and diverted precursor chemicals in 2013. These supply reduction achievements in turn increased market prices for all categories of illegal drugs within Taiwan.

Continuing trends from previous years, seizures of most drugs declined with the exception of amphetamine-type stimulants (ATS) and MDMA (ecstasy), which increased by 537.8 and 11.2 kilograms (kg) respectively from 2012 levels. A growing problem in Taiwan, ketamine remains popular among teenagers as a party drug with perceived low potential for addiction and no criminal penalties for possession of small amounts (less than 20 grams). China is the source of approximately 76 percent of the ketamine seized or sold in Taiwan. ATS also account for significant drug usage; however, strong controls over purchases of legally produced precursor chemicals and aggressive efforts to identify and seize illegal drug factories have significantly decreased domestic production and international trafficking of ATS, through Taiwan. In early October, authorities seized 103 kg of heroin and 249 kg of ketamine originating from Vietnam – the largest heroin seizure in Taiwan drug enforcement history.

The Ministry of Justice (MOJ) leads Taiwan's counternarcotics efforts with respect to manpower, budgetary, and legislative responsibilities. The Ministry of Justice Investigations Bureau (MJIB), National Police Agency (NPA), Coast Guard, Customs Directorate, and Military Police contribute to counternarcotics efforts and cooperate on joint investigations, openly sharing information with the U.S. Drug Enforcement Administration and other Asia-Pacific law enforcement counterparts. Taiwan's undercover and electronic surveillance laws hamper law enforcement efforts to investigate drug cases while geographic challenges limit authorities' abilities to provide long-term witness protection.

Addiction is viewed primarily as a health issue, and efforts focus on treatment, rehabilitation, and support of recovered addicts. The criminal justice system offers users the option of voluntary long-term treatment in lieu of incarceration. Most prisons lack the infrastructure and resources to treat addicts, and the recidivism rate is high. Taiwan's inability to participate in the United Nations and other international organizations presents obstacles to its full involvement in regional and international counternarcotics efforts. However, Taiwan continues to forge relationships with other Asia-Pacific countries, including China, to exchange drug intelligence, resulting in drug seizures and arrests.

Although there is no bilateral extradition treaty between the United States and Taiwan, a mutual legal assistance agreement is in place, under the auspices of the American Institute in Taiwan and the Taipei Economic and Cultural Representative Office in the United States, through which Taiwan regularly affords mutual legal assistance to U.S. counterparts.

US State Dept Trafficking in Persons Report 2014 (introduction):

Taiwan is classified a Tier 1 country - is a country whose government fully complies with the Trafficking Victims Protection Act's (TVPA) minimum standards.

Taiwan is a destination territory for men, women, and children subjected to forced labor and sex trafficking and, to a much lesser extent, a source territory for women subjected to sex trafficking. Most trafficking victims in Taiwan are migrant workers from Indonesia, mainland China, the Philippines, Cambodia, Thailand, Vietnam, and to a lesser extent, Bangladesh and India. Most of the 500,000 migrant workers are employed through recruitment agencies and brokers to perform low-skilled work in Taiwan as home caregivers and domestic workers, or in manufacturing, construction, and fishing industries. Many of these workers fall victim to labor trafficking by brokers, some of whom are Taiwan passport-holders, in their home countries or to employers in Taiwan. Migrant workers are reportedly charged up to the equivalent of approximately \$7,700 in recruitment fees, resulting in substantial debts used by brokers or employers in Taiwan as tools of coercion to obtain or retain a migrant's labor. NGOs report Taiwan brokers work with source country recruiters to compel workers to take out loans for recruitment fees at local branches of Taiwan banks at high interest rates. After recruitment fee repayments are garnished from their wages, some foreign domestic service workers in Taiwan earn significantly less than minimum wage. Labor brokers in Taiwan often assist employers in forcibly deporting "problematic" foreign employees should they complain; this enables the broker to fill the empty positions with new foreign workers and continually use debt bondage to control the work force. Some employers of these workers forbid their employees from leaving their residences, increasing their vulnerability to labor trafficking. NGOs estimate there are up to 160,000 migrant workers onboard Taiwan fishing vessels around the world, some of whom have reported non- or under-payment of wages, long working hours, physical abuse, lack of food, and poor living conditions; an unknown number of these men are trafficking victims. Some women and girls from mainland China and southeast Asian countries are lured to Taiwan through fraudulent marriages and deceptive employment offers for purposes of sex trafficking. Women from Taiwan are recruited through classified ads for employment in Japan, Australia, the United Kingdom, and the United States; after their arrival in these countries, some are forced into prostitution.

Taiwan authorities fully comply with the minimum standards for the elimination of trafficking. During the reporting period, Taiwan authorities continued to prosecute trafficking offenses, including both forced labor and forced prostitution. Authorities trained law enforcement and other officials and raised public awareness of trafficking. Permanent residency visas for trafficking victims are available; however, authorities have not granted this visa to trafficking victims since the category became available in 2009 and continued to deport all trafficking victims at the end of their trials. Authorities did not prosecute alleged labor traffickers onboard Taiwan fishing vessels, despite allegations of labor trafficking abuses.

Latest US State Dept Terrorism Report

Taiwan is not a member of the United Nations and, therefore, is not subject to UNSC Resolutions and cannot join UN counterterrorism conventions and protocols. Nonetheless, Taiwan sought to implement, to the maximum extent possible, all UN resolutions related to combating terrorism and terrorist finance issues. Taiwan continued to provide rapid and thorough responses on terrorist financing issues to the American Institute in Taiwan (AIT). The

"Antiterrorist Action Law" proposed in 2006 by Taiwan's Executive Yuan, is still awaiting action by the Legislative Yuan. Taiwan revised its Money Laundering Control Act in 2009 to extend the law's coverage to the financing of crimes that intimidate the public or threaten "the government, a foreign government or institution, or international organization."

The Taiwan Office of Homeland Security (OHS) coordinated several large-scale training exercises among law enforcement and security agencies. Taiwan sought ways to harden and protect its critical infrastructure, in order to maintain continuity of operations and government in the event of an attack or disaster. OHS also coordinated counterterrorism exercises with Taiwan law enforcement and security agencies prior to the "2009 Kaohsiung World Games" and the "2009 Taipei Deaf Olympics."

None applicable

Index	Rating (100-Good / 0-Bad)
Transparency International Corruption Index	61
World Governance Indicator – Control of Corruption	77

US State Department

Taiwan has implemented laws, regulations, and penalties to combat corruption. The Corruption Punishment Statute and the Criminal Code contain specific penalties for corrupt activities, including maximum jail sentences of life in prison and a maximum fine of up to NT\$100 million (US\$3.3 million). In April 2009, the Legislative Yuan amended the Act for the Punishment of Corruption to bring criminal charges against civil servants who fail to account for abnormal increases in their assets. In July 2011, the administration established the Agency Against Corruption to strengthen efforts to crack down on corruption.

In November 2011, the Legislative Yuan passed amendments to the Anti-Corruption Act that expanded the scope of activities it covered and increased penalties for public officials who fail to explain the origins of suspicious assets or property. Based on the revised act, public servants suspected of corruption are required to declare the origins of their assets if an increase in their assets is disproportionate to an increase in their income in the three years following the allegations. If defendants refuse to offer an explanation, or if the explanation proves to be false and the defendants are found guilty of corruption, they face a jail sentence of up to five years or a fine of no more than the value of the assets of undeclared origin, or both.

The U.S. Government is not aware of cases where bribes have been solicited for foreign investment approval.

Taiwan formally became a member of the WTO Agreement on Government Procurement (GPA) in 2009. The Public Construction Commission (PCC) publishes all state procurement projects that require open bidding, in accordance with WTO transparency requirements. The PCC indicated that in 2011, 2496 contracts were awarded for US\$13.6 billion; 421 of these contracts valued at US\$5.1 billion went to GPA members; U.S. firms were awarded 157 contracts worth US\$326 million. Foreign tenders accounted for over 37% of all state procurement projects awarded in 2011, among which over 16% were awarded to the U.S. bidders in the past year. Government procurement projects open to WTO GPA members had been limited to Kaohsiung and Taipei City municipalities. Following rezoning in 2010 to create five special municipalities -- Taipei City, New Taipei City, Taichung City, Tainan City and Kaohsiung City -- and a revised GPA implemented in December 2011, Taiwan has expanded coverage to the new entities.

The Legislative Yuan in January 2011 passed the following additional amendments to the Government Procurement Act : (1) Procurements of technology, information, and professional services can be based on quality (i.e., the most advantageous bids), rather than price; (2) A GP data bank containing a list of individual prices of awarded construction tenders exceeding NT\$10 million (US\$331,400); and (3) Procurement agencies are required to use model contracts provided by PCC to reduce potential disputes.

The PCC organizes inspection teams to monitor all public procurement projects both at the central and local levels, and publishes the bidding and inspection results. A task force comprised of PCC staff and independent experts investigates complaints.

The authorities generally investigate allegations of corruption and take action to penalize corrupt officials. From January to October 2012, prosecutors indicted 826 persons on various corruption charges, including 55 senior officials (department director level and above) and 17 elected officials. There were several high-profile corruption cases involving senior officials over the last year. Former Executive Yuan Secretary-General Lin Yi-shih was indicted in October for receiving bribes amounting to NT\$60 million (US\$ 2.1 million), concealing illegal gains and holding unaccountable assets. In December 2012, prosecutors indicted former Director-General of the National Fire Agency Huang chi-min on corruption charges and recommended a life sentence. Huang was accused of taking NT\$19.24 million (US\$662,426) in bribes related to 9 of the agency's major procurement projects. In addition, former chief secretary of the Criminal Investigation Bureau Hsu Jui-shan was indicted in December on several charges including corruption and profiteering. Prosecutors recommended a sentence of 15 years.

Former President Lee Teng-hui was indicted in June 2011 on charges of money laundering and embezzling money from a secret diplomatic fund. Lee made his first court appearance for a pretrial procedure in August. Further pretrial procedures are required before the case goes to trial. In December 2010, former Taiwan president Chen Shui-bian began serving a 17-year jail term after being convicted on corruption and money laundering charges and losing an appeal to the Supreme Court. The Taiwan High Court ruled on November 1, 2012 that Chen should serve 18 years and six months in jail and pay the fine amounting to NT 156 million (US\$5.38 million) for money laundering and corruption in three cases. The High Court also announced on November 5, 2012 that Chen's wife, Wu Shu-chen should serve a sentence of 19 years and two months and pay NT 158 million (US\$5.45 million) fine for money laundering, corruption, influence peddling and perjury in six cases.

Attempting to bribe or accepting a bribe from Taiwan officials constitutes a criminal offense, punishable under the Corruption Punishment Statute and the Criminal Code. The Corruption Punishment Statute also treats payment of a bribe to a foreign official as a crime and makes such a bribe subject to criminal prosecution. The maximum penalty for a public official receiving a bribe is life imprisonment or a maximum fine of NT\$100 million (US\$3.3 million). For those attempting to bribe officials, the maximum penalty is 7 years in prison and a fine of NT\$3 million (US\$99,400). In addition, the offender will be barred from holding public office. The assets obtained from acts of corruption are seized and turned over to either the injured parties or the Treasury.

Corruption and Government Transparency - Report by Global Security

Political Climate

Located off the southeastern coast of mainland China, Taiwan is one of the 'Four Asian Tigers'. The manufacturing of electronics is its most important industrial sector and fuels its export-driven economy. Taiwan has been virtually independent since the Kuomintang (KMT) lost the civil war in China and fled to Taiwan in 1949. The KMT ruled Taiwan until March 2000, when Chen Shui-bian (from the Democratic Progressive Party, DPP) won the presidential election, ending more than 50 years of KMT monopoly rule in Taiwan. Chen Shui-bian was the President of Taiwan from 2000 to 2008. In March 2008, Ma Ying-jeou, from the KMT, won the presidential election, once again bringing the KMT back to power in Taiwan. He was re-elected in January 2012.

According to Freedom House 2011, corruption remains an ongoing problem despite being less pervasive than in the past. Political corruption is frequently reported in the mass media and is prosecuted rigorously under the criminal law. A recent political scandal that has received widespread media attention was the conviction of former President Chen Shui-bian and his wife on corruption and money laundering charges. According to an October 2011 article by The New York Times, Chen-Shui-bian was given an 18-year prison sentence, in addition to the 17 years he is already serving for corruption. Chen Shui-bian is the first president in Taiwanese history to be indicted and convicted of corruption, despite his vows to end decades of political corruption when he was elected in 2000, as reported in September 2009 articles by The New York Times and Taipei Times. Some family members and associates of the former presidential couple, including their son and daughter-in-law, also received prison sentences due to money laundering and other corruption-related crimes, according to the same article by Taipei Times. Another major political corruption scandal came to light in 2011, involving former President Lee Teng-hui, Chen Shui-bian's predecessor. Lee was accused of embezzling USD 7.8 million in state funds during his 1988-2000 presidency. According to a July 2011 article by The Financial Times, he faces possible life imprisonment if convicted. Lee is the second former Taiwanese president to be charged with corruption.

In 2010, the judiciary has been hit by a string of corruption scandals (see more on 'judicial system' in the Corruption Levels section). According to a July 2011 article by Taipei Times, this has prompted President Ma Ying-jeou to establish a new anti-corruption agency, the Agency Against Corruption (AAC), to exclusively focus on fighting corruption within government agencies. It still remains to be seen how effective the AAC will be in tackling corruption. According to Transparency International's Global Corruption Barometer 2010, 42% the households perceive that the level of corruption in Taiwan has increased over the past 3 years. In the same survey, 37% of the respondents perceived the Taiwanese government's fight against corruption to be 'effective', while 28% perceived it as 'ineffective'. According to two other surveys conducted in 2011, cited in a February 2012 article by Focus Taiwan, more than 80% of the surveyed citizens felt that government corruption had decreased since President Ma Ying-jeou took office in 2008. Moreover, 86% of the respondents stated that they have confidence in the AAC. The three most intolerable forms of corruption listed by the respondents are: bribery in elections, illegal lobbying and the 'red envelope culture', meaning giving civil servants money in red envelopes to influence them, according to the surveys.

Business and Corruption

Corruption does not appear to be very problematic for doing business in Taiwan, as illustrated in the World Economic Forum Global Competitiveness Report 2011-2012. In fact, the surveyed business executives rank corruption as one of the least problematic factors for doing business. According to another survey, Bribe Payers Index 2011, released by Transparency International, Taiwan ranks 19th out of 28 nations, indicating that the perceived likelihood of Taiwanese companies engage in bribery abroad is relatively high. Transparency International's Taiwan branch, as cited in a November 2011 article by Taipei Times, states that Taiwan has made no progress since 2008, when the Bribe Payers Index 2008 was released. According to Bribe Payers Index 2008, 17% of the surveyed companies stated that foreign bribery in the form of bribing high-ranking politicians or political parties is a prevalent practice, while 14% stated that it is a prevalent practice to bribe low-level public officials to 'speed things up'.

According to the household survey - Global Corruption Barometer 2010, conducted by Transparency International, corruption within the business and private sector is perceived to be pervasive, with approximately 19% of respondents evaluating it as 'extremely corrupt', while less than 1% of respondents evaluating it as 'not at all corrupt'. Also, according to two other household surveys conducted in 2011, cited in a February 2012 article by Focus Taiwan, the most corrupt body listed by the respondents is conglomerates that influence government policies, indicating that citizens do not think that the business and private sector have a high degree of integrity. Finally, when respondents from the Global Corruption Barometer 2010 were asked which institutions they perceived to be affected by corruption, public officials/civil servants scored 3.8 on a 5-point scale (1 being 'not at all corrupt' and 5 'extremely corrupt').

In July 2009, Taiwan acceded to the World Trade Organisation's Agreement on Government Procurement (GPA), which embodies the principles of transparency, and fair and effective competition. Taiwan is now obligated to open much of its government procurement projects to international bidding by suppliers from other GPA members. According to the US Department of State 2011, the Public Construction Commission (PCC) publishes all major projects that require open bidding, in accordance with the requirements set by the GPA. Nonetheless, according to a December 2011 article by Global Security, corruption is pervasive in government procurement, particularly in public-sector construction projects. In addition, local level construction tenders are reported to have the highest level of corruption, according to the same article. For these reasons, companies are recommended to use a specialised public procurement due diligence tool in order to mitigate corruption risks related to public procurement in Taiwan. In addition, companies that planning to invest in or are already doing business in Taiwan are highly recommended to implement integrity systems and to conduct extensive due diligence when contracting agents to facilitate business transactions in Taiwan.

Regulatory Environment

In June 2010, Taiwan signed the Economic Cooperation Framework Agreement (ECFA) with China, a preferential trade agreement between the two governments aiming to reduce trade tariffs. According to the US Department of State 2011, the pact is expected to contribute to the already robust investment climate in the upcoming years. According to the

same report, in order to improve the investment climate, Taiwan has removed the list of permitted investments, but still maintains a 'negative' list of industries closed to foreign investment on the grounds of security and environmental protection reasons. Liberalisation has reduced that list to less than 1% of manufacturing categories and less than 5% of service industries. Railway transport, freight transport by small trucks, pesticide manufacture, real estate development, brokerage, leasing and trading are all open to foreign investment.

According to the World Bank & IFC Doing Business 2012, Taiwan has eased the business start-up process by implementing an online one-stop shop (in Chinese) for business registration. The online one-stop shop is set up by the Ministry of Economic Affairs (MOEA), and has been operational since May 2011. Starting a company in Taiwan requires an entrepreneur to go through 3 procedures, taking an average of 10 days at a cost of only 2.5% of per capita income - which is less time-consuming, less cumbersome and less costly than the regional and the OCED average. According to the World Economic Forum Global Competitiveness Report 2011-2012, business executives rank policy instability and inefficient government bureaucracy as the two most problematic factors for doing business in Taiwan. When business executives are asked about the burden of government regulations, they give Taiwan a score of 3.8 on a 7-point scale (1 'extremely burdensome' and 7 'not burdensome at all'). However, Taiwan is still ranked relatively high amongst the 142 economies, where the highest ranking represents the lowest burden of government regulations.

According to the US Department of State 2011, Taiwan has a set of comprehensive commercial laws, and the court system is generally perceived as independent and free from political interference. Taiwan's Arbitration Law was amended in 1998 to comply with international practices and many of its provisions are influenced by the Model Law promulgated by the United Nations Commission on International Trade Law (UNCITRAL Model Law). Property rights are generally protected and enforced through a registration system. According the same report, disputes are normally resolved according to domestic laws and regulations, and based on national treatment or investment guaranty agreements. Taiwan is not a member of the International Centre for the Settlement of Investment Disputes (ICSID) and not a party to the New York Convention 1958. Access the Lexadin World Law Guide for a collection of legislation in Taiwan.

Section 3 - Economy

Taiwan has a dynamic capitalist economy with gradually decreasing government guidance of investment and foreign trade. Exports, led by electronics, machinery, and petrochemicals have provided the primary impetus for economic development. This heavy dependence on exports exposes the economy to fluctuations in world demand. Taiwan's diplomatic isolation, low birth rate, and rapidly aging population are other major long-term challenges. Free trade agreements have proliferated in East Asia over the past several years, and following the landmark Economic Cooperation Framework Agreement (ECFA) signed with China in June 2010, Taiwan in July 2013 signed a free trade deal with New Zealand—Taipei's first-ever with a country with which it does not maintain diplomatic relations—and in November inked a trade pact with Singapore. Negotiations continue on follow-on components of ECFA regarding trade in goods and a dispute resolution mechanism; a trade in services agreement is under review in the legislature. Taiwan's Total Fertility rate of just over one child per woman is among the lowest in the world, raising the prospect of future labor shortages, falling domestic demand, and declining tax revenues. Taiwan's population is aging quickly, with the number of people over 65 accounting for 11.2% of the island's total population as of 2012. The island runs a large overall trade surplus largely because of its surplus with China, and its foreign reserves are the world's sixth largest, behind China, Japan, Saudi Arabia, Russia, and Switzerland. In 2006 China overtook the US to become Taiwan's second-largest source of imports after Japan. China is also the island's number one destination for foreign direct investment. Taiwan since 2009 has gradually loosened rules governing Chinese investment on the island, and has also secured greater market access for its investors in the mainland. In August 2012, Taiwan Central Bank signed a memorandum of understanding on cross-Strait currency settlement with its Chinese counterpart. The MOU allows for the direct settlement of Chinese RMB and the New Taiwan dollar across the Strait, which could help develop Taiwan into a local RMB hub. Closer economic links with the mainland bring greater opportunities for the Taiwan economy, but also poses new challenges as the island becomes more economically dependent on China while political differences remain unresolved.

Agriculture - products:

rice, vegetables, fruit, tea, flowers; pigs, poultry; fish

Industries:

electronics, communications and information technology products, petroleum refining, armaments, chemicals, textiles, iron and steel, machinery, cement, food processing, vehicles, consumer products, pharmaceuticals

Exports - commodities:

electronics, flat panels, machinery; metals; textiles, plastics, chemicals; optical, photographic, measuring, and medical instruments

Exports - partners:

China 27.1%, Hong Kong 13.2%, US 10.3%, Japan 6.4%, Singapore 4.4% (2012 est.)

Imports - commodities:

electronics, machinery, crude petroleum, precision instruments, organic chemicals, metals

Imports - partners:

Japan 17.6%, China 16.1%, US 9.5% (2012 est.)

Banking

As of 2010, Taiwan has a Central Bank, 37 domestic banks (with 3,326 branch offices), and 29 foreign banks (with 98 branch offices). In addition, there are 26 credit cooperatives, 276 farmers' credit unions, and 25 fishermen's credit unions. These banks, cooperatives, and credit unions have traditionally played a dominant role in finance on the island.

The Central Bank performs all of the functions normally associated with central banks in other countries. It issues currency, manages foreign-exchange reserves, handles treasury receipts and disbursements, sets interest-rate policy, oversees the operations of local financial institutions, and serves as a lender of last resort.

Taiwan's domestic banks offer a wide range of services – receiving deposits, making loans, handling trade financing and providing guarantees, and discounting bills and notes. Most are also involved in the securities business, in underwriting and trading securities and managing bond and debenture issues, as well as in providing savings- account facilities. The Mega International Commercial Bank assists with long-term financing for industries and projects, while the Export-Import Bank of the Republic of China and the Farmers Bank focus on trade financing and agricultural development, respectively.

Foreign banking institutions have played an important role on the financial scene. Foreign banks are essentially treated like domestic commercial banks; they are permitted to engage in trade financing, foreign-exchange dealings, private and corporate lending, and various kinds of trust businesses. In order to build a greater overall market presence, many foreign banking institutions also concentrate on the development of consumer loan and credit card services.

Stock Exchange

Taiwan's capital market is mature and active. According to the most recent available data, as of November 2010, 747 companies were listed on the [Taiwan Stock Exchange](#) (TAIEX). The ratio of the market value of listed companies to GDP was 162.9%. The market value of the listed companies in Taiwan was at US\$ 734 billion. The transaction volume of Taiwan's securities and stock exchange market reached US\$ 990 billion, and the turnover rate of the transaction volume was 178.3% in 2010.

Executive Summary

Strategically located between Northeast and Southeast Asia, Taiwan is an important hub for regional and global trade and investment, especially in the high-technology industry. Indicative of its developed and open investment environment, Taiwan ranks in the upper tenth percentile of major global indices measuring ease of doing business, economic freedom, and competitiveness. Taiwan's investment climate has improved in recent years with expanded cross-Strait trade with mainland China and expansion of trade links with other partners in the Asia Pacific region, as well as reforms to enhance protection of intellectual property rights and rationalize other investment-related regulations. As a relatively open and liberal economy, Taiwan has historically benefited from substantial foreign direct investment, with a total stock of US\$126 billion in approved investments as of 2013. Last year saw lower than expected GDP growth of 2.11%, negatively affected by demand-side contractions in Taiwan's export sector, and an 11.3% decline in year-on-year foreign investment. The U.S.-Taiwan investment relationship remains mutually beneficial with ample room to grow. The United States is Taiwan's largest source of foreign investment, with the stock of committed U.S. foreign direct investment reaching \$16.5 billion in 2012, and sales of services to Taiwan by U.S. majority-owned affiliates totaled over \$7 billion in 2011.

Remaining structural challenges in Taiwan's investment environment include stalled progress on privatization of Taiwan's state-owned enterprises, which exert considerable influence in the utilities, aerospace, energy, postal, transportation, and financial and real estate sectors. Foreign ownership limits remain in place for wireless and fixed-line telecommunications, television broadcast, and transportation. Restrictions on investments from mainland China have been gradually relaxed as cross-Strait ties have improved. The Central Bank retains a currency convertibility policy that could require large transactions involving transfer of New Taiwan Dollars that could impact the foreign exchange market to be scheduled over several days.

Over the past year, Taiwan's financial regulatory authorities have taken steps to address concerns raised by investors regarding the transparency and predictability of Taiwan's foreign investment approval process. Proposed amendments to investment-related statutes, currently pending legislative review, would clarify review criteria for merger and acquisition transactions and subject fewer investment applications to mandatory regulatory review. In January 2014, the current administration announced Taiwan's intent to undertake significant liberalization to prepare Taiwan for potential entry into regional trade blocs, which included a review of longstanding gaps in intellectual property protection for pharmaceuticals. The results of this review process and Taiwan's ability to legislate recommended reforms are expected to be the primary determinants of the quality of Taiwan's investment environment in the coming year.

1. Openness To, and Restrictions Upon, Foreign Investment

Strategically located between North and Southeast Asia, Taiwan is a critical hub for regional and global trade and investment. Expanded cross-Strait trade with mainland China through the Economic Cooperation Framework Agreement (ECFA) signed in 2010 improved Taiwan's

investment climate by reducing tariffs and other commercial barriers. In 2013, inward foreign direct investment (FDI) declined by 11.2% after posting a 12.2% growth in 2012. Taiwan's many science and industrial parks, export processing zones, and free trade zones aim to expand trade and investment opportunities by granting tax incentives, tariff exemptions, low-interest loans, and other favorable terms. However, Taiwan's overall economic performance over the past year remained subdued as a result of persistent weak growth in its major export markets. GDP growth in 2013 was 2.11%, up from 1.48% in 2012. In its Doing Business 2014 report, the World Bank ranked Taiwan 16th out of 189 economies for "Ease of Doing Business", unchanged from last year after rising from 25th in 2011.

Table 1

Measure	Year	Index/Ranking
World Bank Doing Business	2014	16th
TI Corruption Index	2012	37th
Heritage Economic Freedom	2014	17th
Legatum Prosperity Index	2013	22nd
WEF Global Competitiveness Report	2013	12th

Taiwan maintains a "negative" list of industries closed to foreign investment for reasons its authorities assert relate to security and environmental protection, including public utilities, power distribution, natural gas, postal service, telecommunications, mass media, and air and sea transportation. These sectors constitute less than 1% of manufacturing in Taiwan and less than 5% of the island's service sector. Railway transport, freight transport by small trucks, pesticide manufacture, real estate development, brokerage, leasing, and trading are all open to foreign investment.

While most foreign ownership limits have been removed, the foreign ownership limit on wireless and fixed line telecommunications firms is 60%, including a foreign direct investment limit of 49%. State-owned Chunghwa Telecom Co., which controls 97% of the fixed line telecom market, maintains a 55% limit on indirect foreign investment and a 49% limit on direct foreign investment. There is a 20% limit on foreign direct investment in cable television broadcast services, but foreign ownership of up to 60% is allowed through indirect investment via a Taiwan entity. Foreign investors control one of Taiwan's five largest cable TV networks. In addition, there is a foreign ownership limit of 49.99% for satellite television broadcasting services and piped distribution of natural gas, and a 49% limit for high-speed railways. The foreign ownership cap on ground-handling firms, air-catering companies, aviation

transportation businesses (airlines), and general aviation business (commercial helicopters and business jet planes) is less than 50%, with a separate limit of 25% for any single foreign investor. For Taiwan-flagged merchant ships, foreign investment is limited to 50% for Taiwan shipping companies operating international routes.

Regulations governing foreign direct investment principally derive from the Statute for Investment by Foreign Nationals (SIFN) and the Statute for Investment by Overseas Chinese (SIOC). These two laws permit foreign investors to use either foreign currencies or New Taiwan Dollars (NTD). Since 2006, NTD loans obtained from local banks can serve as sources of foreign direct investment. Both the SIFN and the SIOC specify that foreign-invested enterprises must receive the same regulatory treatment accorded local firms. Foreign companies may invest in state-owned firms undergoing privatization and are eligible to participate in publicly-financed research and development programs. In late 2012, in pursuit of greater economic liberalization, the Executive Yuan passed the preliminary amendments to SIFN and SIOC, which are currently under the review by the Legislature. If passed, foreign investors would no longer need to secure pre-approval but could instead report the investment to the Investment Commission (IC) of the Ministry of Economic Affairs (MOEA) within a certain period of time after implementation, as long as the investment fell under a certain threshold. However, *ex ante* approval would still be required for investments in restricted industries and those exceeding the threshold.

Taiwan has been gradually relaxing restrictions on investments from the People's Republic of China (PRC, or "mainland China") as cross-Strait relations have improved. Since 2009, Taiwan has eased restrictions on investments from mainland China in three stages. Most of Taiwan's manufacturing industry and half of its services and public construction sectors are now open to mainland investment. However, due to restrictions limiting percentage of ownership, and restrictions on mainland investors' participation in Taiwan business operations, investment liberalization to date has not drawn significant interest from mainland investors. In June 2013, Taiwan signed the cross-Strait Agreement on Trade in Services with mainland China under the ECFA, but legislative review of the Agreement has stalled due to strong public opposition.

In 2009, Taiwan launched the first phase of opening up to mainland Chinese investment. Under its new "Regulations Governing Permission for People from the Mainland Area to Invest in Taiwan," Taiwan has opened 64 sectors in manufacturing, 117 in services, and 11 in public construction. In order to own shares in a Taiwan company or establish a presence in Taiwan, mainland entities and foreign companies in which mainland entities have over a 30% share must first obtain permission from the interagency Investment Commission (IC) convened by the Ministry of Economic Affairs (MOEA). The Taiwan authorities may also prohibit or restrict investment from mainland Chinese enterprises that: (1) have military shareholders or a military purpose; (2) would create a monopoly; (3) would threaten national security, or; (4) would negatively impact domestic economic development, according to the above-cited regulation.

In a second round of cross-Strait investment liberalization, Taiwan announced in 2011 an additional 42 categories, including 25 sectors in manufacturing, 8 in services and 9 in public infrastructure, which would be open for investment from mainland China. The manufacturing categories include medical devices, machinery for making metal products, and petrochemicals. In March 2012, Taiwan announced a third tranche of relaxed restrictions on

mainland investments. As a result, Taiwan has opened more than two-thirds of Taiwan's aggregate industrial categories to mainland China investors, with manufacturing topping the list, in which 97% of the sector is now open to mainland Chinese capital. In the public construction and service sectors, investment shares open to mainland investors expanded to 51 percent. Mainland Chinese investors, however, continue to be prohibited from serving as a Taiwan company's Chief Executive Officer, although a mainland Chinese board member may retain management control rights of a Taiwan company.

Press reports indicate that in a subsequent fourth round of liberalization of mainland Chinese investment in Taiwan, MOEA plans to remove prohibitions on mainland ownership of controlling stakes in 7 key industries, including light emitting diode (LED) displays, integrated circuit assemblies, semiconductor manufacturing equipment, semiconductor packaging and testing, metal cutting tool machines, and solar batteries. MOEA proposes to impose a shareholding ceiling of 50% for mainland Chinese investment in these industries, and retain a mechanism for screening investment applications on a case-by-case basis. As a result of the controversy over the cross-Strait Agreement on Trade in Services, this fourth stage of cross-Strait investment liberalization, which was originally expected to launch in late 2013, has been put on hold.

Taiwan expects that these investment liberalization measures with mainland China will enhance bilateral cooperation in forming cross-Strait industrial supply chains. As of 2013, Taiwan approved 483 investment applications from mainland China totaling US\$864.5 million, with investment in port facilities and banking operations each accounting for 16% of total mainland investment. In the banking industry, there are now three mainland banks (out of four which have qualified) that have established branches in Taiwan.

MOEA's IC screens applications for investment, acquisitions, and mergers. Ninety-five percent of projects that are not on the negative list generally obtain approval within three working days, according to the IC website. Specifically, approval of projects with an investment value of less than NT\$500 million (US\$16.5 million) is generally granted within two working days at the IC division chief level. For investments between NT\$500 million and NT\$1 billion (US\$33 million) that are not on the negative list, approval authority rests with the IC Executive Secretary and normally are also granted within three working days. Approval of investments above NT\$1 billion or on the negative list requires three weeks, as these investments must be referred to the relevant supervisory ministries and require approval of the IC Chairman or IC Executive Secretary. Investments involving mergers and acquisitions require screening at the monthly meeting of an inter-ministerial commission. To address increased concern over the potential risk of more opening to mainland Chinese investment, starting in April 2014, the National Security Bureau will take part in every review meeting for foreign investment applications regardless of the nature or size of the investment.

2. Conversion and Transfer Policies

There are relatively few restrictions in Taiwan on converting or transferring direct investment funds. Foreign investors with approved investments can readily obtain foreign exchange from a large number of designated banks. The remittance of capital invested in Taiwan must be reported in advance to the IC, but IC approval is not required. Declared earnings, capital gains, dividends, royalties, management fees, and other returns on investments can be repatriated at any time. For large transactions requiring the exchange of NTD into foreign

currency that could potentially disrupt Taiwan's foreign exchange market, the Central Bank may require the transaction to be scheduled over several days. There is no written guideline on the size of such transactions, but according to law firms servicing foreign investors, amounts in excess of US\$100 million may be affected. Capital movements arising from trade in merchandise and services, as well as from debt servicing, are not restricted. No prior approval is required for movement of foreign currency funds not requiring exchange between NTD and foreign currency. No prior approval is required if the cumulative amount of inward or outward remittances does not exceed the annual limit of US\$5 million for an individual or US\$50 million for a corporate entity.

Total outbound investment may not exceed 40% of an investing company's net worth or paid-in capital (whichever is less), unless it is a professional investment company, the company charter waived the 40% limit, or such investment is approved by shareholders. If the amount of investment exceeds US\$50 million, the company must file an application with MOEA's IC. Otherwise, a local company is not required to obtain prior approval for overseas investments, except with respect to investments in mainland China.

Taiwan has relaxed restrictions on direct investment in mainland China. Taiwan investors are permitted to invest in the majority of manufacturing and service categories in the mainland. The IC, however, continues to prohibit investments in mainland China's agricultural, high-technology, telecommunications and basic infrastructure sectors. Taiwan entities are not required to go through a third jurisdiction to make their investments on the mainland. In 2008, authorities raised the annual ceiling on an individual's investment in mainland China from US\$2.5 million to US\$5 million. The ceiling on small and medium enterprise investment in mainland China is either US\$2.5 million or 60% of the investing firm's net worth, whichever is higher. For large enterprises, total investment in mainland China is capped at 60% of net worth. This cap, however, does not apply to foreign subsidiaries in Taiwan. For investments below US\$1 million, approval is not required, but investors must report the investment to the IC within six months. For investments between US\$1 million and US\$50 million, approval can be granted in two weeks. Taiwan authorities require an investor to submit a quarterly financial report if the cumulative investment in a project exceeds US\$50 million.

Taiwan authorities have encouraged investment in Southeast Asia and India. Investments are also encouraged in a number of countries with which Taiwan has diplomatic relations, mainly in Central America. Incentives include loans and/or overseas investment insurance from Taiwan's Export-Import Bank. Since ECFA's signing, the authorities have also significantly increased promotion activities designed to attract more foreign direct investment.

3. Expropriation and Compensation

The U.S. Government is not aware of any previous or recent cases of nationalization or expropriation of foreign-invested assets in Taiwan. There are no reports of "creeping expropriation" or official actions tantamount to expropriation. Under Taiwan law, no venture with 45% or more foreign investment can be nationalized, as long as the 45% capital contribution ratio remains unchanged for a period of 20 years after the establishment of the foreign business. Expropriation can be justified only for national defense needs, in which case "reasonable" compensation must be provided.

4. Dispute Settlement

Taiwan is not a member of the International Center for the Settlement of Investment Disputes (ICSID), established by the World Bank to provide arbitration and conciliation services for governments and foreign investors. Foreign investment disputes with the Taiwan authorities are not common. Normally, Taiwan resolves disputes according to domestic laws and regulations, and based on national treatment or investment guarantee agreements. Taiwan has implemented investment guaranty agreements with 31 nations, the latest of which are bilateral investment protection agreements signed with Japan in September 2011 and mainland China in August 2012. Taiwan is also in the process of negotiating an investment dispute settlement agreement with the mainland under ECFA.

Taiwan has comprehensive commercial laws, including the Company Law, Commercial Registration Law, Business Registration Law, and Commercial Accounting Law, as well as laws governing specific industries. Taiwan's Bankruptcy Law guarantees that all creditors have the right to share the assets of a bankrupt debtor on a proportional basis. Secured interests in property are recognized and enforced through a registration system.

Taiwan's court system is generally viewed as independent and free from overt interference by the other official branches. Judges often bear a significant workload. As a result, special courts have been set up to resolve minor cases expeditiously. The judgments of foreign courts with jurisdictional authority are enforced in Taiwan by local courts on a reciprocal basis.

The latest version of Taiwan's Arbitration Law, implemented in 1998, sought to bring its arbitration regime into line with international practices. Many provisions in the Arbitration Law are influenced by the Model Law promulgated by the United Nations Commission on International Trade Law ("UNCITRAL Model Law"). The Chinese Arbitration Association, Taipei (the Association) is a non-profit organization established by the Ministry of Interior. The Association has 30 cooperative agreements with other arbitration institutions across the globe. The Association has managed disputes in sectors including construction, maritime, securities, international trade, intellectual property rights (IPR), insurance, cross-strait disputes, and information technology. By agreement, disputants in a case can determine the governing law of the dispute, rules of procedures, language used in proceedings, authority of the arbitrators, place and location of the arbitration, time of the hearing, and extension of the time limit to render the arbitral award, among other factors.

5. Performance Requirements and Incentives

Since its accession to the World Trade Organization (WTO) in 2002, Taiwan has discontinued performance requirements. Taiwan does not require foreign firms to transfer technology, locate in specified areas, or hire a minimum number of local employees as a prerequisite to investment.

Manufacturing firms located in export-processing zones and science-based industrial parks are required to export all of their output in order to obtain tariff-free treatment of production inputs. However, these firms may sell their products in the domestic market upon payment of relevant import duties.

Under the WTO, Taiwan agreed it would phase out industrial offset requirements (IOR) for non-military public procurement and apply IOR only to military procurement, consistent with the practice of other GPA members, when it acceded to the Agreement on Government

Procurement (GPA) in 2009. Taiwan began reducing the IOR coverage of non-military procurements in 2004, and fully eliminated IOR practices for non-military procurement in 2012. The threshold of US\$5 million with a minimum offset of 40% for military procurements has been maintained since 2010. As the result of legislative pressure, the offset ratio in 2009 reached 70% in several cases of military procurement.

Taiwan began allowing industrial offset contracts (IOCs) in 1988. Since then, Taiwan has signed 127 IOCs with 56 suppliers from 12 countries. The commitment value of these contracts total US\$111.8 billion credit points. Realized contracts are valued at US\$6.6 billion credit points, while pre-approved contracts amount to US\$9.2 billion credit points. Both direct and indirect offsets are acceptable. Credit points application distribution was as follows: Forty-four percent of the total realized credit point value was directed to technology transfers, 14.7% to foreign direct investment in Taiwan, 17.9% to procurement from Taiwan, 4.6% to trade promotion, 6.4% to personnel training, 2.4% to assessment certification, and 0.7% to R&D. Taiwan has published industrial offset rules in both Chinese and English, and has made them accessible to the public online.

The United States remains concerned that terms and conditions for model public procurement projects determined by the Taiwan authorities impose large indirect and unforeseeable liabilities on contractors and thereby prevent U.S. firms from bidding on projects.

6. Right to Private Ownership and Establishment

Private investors in Taiwan have the right to establish and own business enterprises, except in a limited number of industries involving national security and environmental protection. Private entities can freely acquire and dispose of interests in business enterprises. Private firms have the same access as state-owned companies to markets, credit, licenses, and supplies. Taiwan authorities have eliminated most state-owned monopolies, with the exception of some companies in the health insurance, financial, and power and water utility sectors.

7. Protection of Property Rights

Taiwan is not a member of the World Intellectual Property Organization (WIPO) but adheres to key international agreements such as the Berne Convention and the Agreement on Trade-related Aspects of Intellectual Property Rights (TRIPS). Reflecting Taiwan's IPR legal regime and enforcement advances, the Office of the U.S. Trade Representative (USTR) removed Taiwan from the Special 301 Watch List in 2009. The United States, however, remains concerned about a number of IPR issues in Taiwan, including online piracy of copyrighted materials, illegal textbook copy on university campuses, inadequate protection for the packaging, configuration, and outward appearance (trade dress), end-user piracy of software, signal theft of cable TV, corporate trade secret theft, and weak pharmaceutical patent protection. The importation and transshipment of counterfeit products from mainland China is also a problem. The United States is actively working with the Taiwan authorities to address these issues.

The Pharmaceutical Law, as amended in 2004 and 2007, increased penalties for the production, distribution and sale of counterfeit medicines. The law authorizes pharmaceutical data exclusivity for five years to prevent unfair commercial data use, the

same exclusivity period as in the United States for chemical drugs. However, the law currently does not cover new indications or biological pharmaceuticals. Taiwan does not currently have a Patent Linkage system, resulting in several cases of generic drugs gaining approval and reimbursement despite the existence of a valid patent. In response, in April 2014 Taiwan established a task force to conduct studies on establishing a patent linkage system. Taiwan's patent application review period is expected to shorten from an average of 41 months in 2013 to less than 22 months in 2016 months following the establishment of Patent Service Center in May of 2012 and implementation of Patent Prosecution Highway (PPH) agreements with the United States and Japan in 2011 and 2012, respectively.

In May 2011, the Legislative Yuan passed an amendment to the Trademark Law, which is modeled after the 2006 "Singapore Treaty on the Law of Trademark." The amendment maintains adherence of Taiwan's trademark law to international standards and expands IPR protections to trademarked goods by extending the scope of goods eligible for protection, broadening the conditions in which infringement shall be deemed to have occurred, and strengthening customs enforcement mechanisms for trademarked goods. The amendment is designed to increase the protection of well-known trademarks and impose stronger penalties on infringers who sell fake commodities through the Internet and electronic media.

The Ministry of Economic Affairs' Intellectual Property Office (TIPO) and other relevant agencies have adopted programs to protect intellectual property rights. Examples include:

- The Judicial Yuan inaugurated in 2008 an Intellectual Property Court authorized to handle all new civil and administrative intellectual property (IP) litigation, as well as appeals on criminal cases to streamline and improve the quality of judicial procedures in IP cases.
- Taiwan authorities have strengthened cooperation with foreign enforcement agencies, including signing an IP cooperation and protection agreement with mainland China in 2010 to combat Internet-related IPR violations.
- The Ministry of Education (MOE) continues to implement an IPR action plan to combat unauthorized textbook copying and illegal downloads on academic computer networks. January 2014 amendments to the action plan are intended to reinforce internal university control mechanisms and improve awareness of IPR protection.

Regarding trade secret infringement, the Legislative Yuan in January 2013 passed an amendment to the Trade Secrets Law to levy more significant penalties for corporate IP theft, including a maximum five-year jail sentence and a NT\$50 million (US\$1.7 million) fine, with increased penalties -- including up to 10 years imprisonment -- for trade secrets taken to other countries, including mainland China. To improve law enforcement procedures for collecting evidence, the Legislative Yuan in January 2014 passed amendments to the Communications Security and Surveillance Act. The amendments allow investigators and prosecutors to conduct wiretapping in trade secret infringement case involving jurisdictions outside Taiwan, such as mainland China. Affected local and foreign firms continue to encourage development of further judicial measures, including through witness protection for trade secrets case and by shifting the part burden of proof to defendants.

In January 2014, the LY passed amendments to the Patent Act that allows patentees to request Taiwan Customs authorities to suspend clearance and detain goods suspected of infringing their patent rights. An affected rights holder must submit a written statement detailing the infringement allegation and a security deposit equivalent to the import value. If final judgment confirms that the detained goods have infringed the patentee's rights, the owner of the detained goods will be responsible for all relevant expenses incurred. Implementing regulations governing detention of suspected patent-infringing goods took effect with the amendments in March 2014.

8. Transparency of Regulatory System

Taiwan has a set of comprehensive laws and regulations regarding taxes, labor, health, and safety. In addition to tax incentives, Taiwan's science and industrial parks and export processing zones present streamlined bureaucratic procedures for the investment application process. Outside of these areas, the Department of Investment Services (DOIS) of the Ministry of Economic Affairs functions as the coordinator between investors and all agencies involved in the investment process. The MOEA's IC is charged with reviewing and approving inbound and outbound investments.

Taiwan has simplified work-permit procedures for foreign "white-collar" employees. The Council of Labor Affairs (CLA) issues work permits for all white-collar workers through a single window service portal. Employers can apply on-line for work permits for their foreign employees, which are typically issued within 7 to 10 days and may be extended indefinitely as long as the employer considers the employment necessary.

Since January 2012, Taiwan employers are able to hire "blue collar" foreign workers online through a network system designed by the Council of Labor Affairs. This system is expected to save employers and foreign workers NT\$63,000 (US\$2,170) in administrative costs and will reduce the hiring process from an average of 3 months to 30 working days. NGOs, however, have argued that complicated procedures and restrictions on use of both the Service Center and the online service have prevented widespread implementation, and they

advocate lifting restrictions on transfers between employers. The maximum duration of foreign workers' stay in Taiwan is 12 years.

Foreign white-collar workers are required to hold a bachelor's degree and two years of relevant work experience to enter Taiwan's job market. There are no job experience requirements, however, for foreign management professionals employed in research and development (R&D) centers, international firms operations headquarters, and firms in designated industries. White-collar workers with a master's degree or above are not subject to any job experience requirement for employment in Taiwan. Those with lower education levels employed in non-professional or technical positions are required to have relevant job experience. Foreign white collar workers have the right to obtain permanent residence status after they have legally stayed in Taiwan for seven consecutive years, with a minimum time of residence of 180 days per year. The seven-year requirement is waived for high-tech professionals and those who have made "significant contributions" to Taiwan. Blue collar workers have no such rights to obtain permanent residence status automatically after seven years' legal residence.

There are simplified entry-visa issuance procedures for foreign white-collar workers who work for foreign companies. A foreign executive who enters Taiwan with a tourist visa is not required to leave the island in order to convert the tourist visa to an employment visa. Similarly, a foreign executive whose employment visa expires is not required to leave in order to renew the visa.

9. Efficient Capital Markets and Portfolio Investment

Taiwan's capital market is mature and active. As of December 2013, 838 companies were listed on the Taiwan Stock Exchange (TAIEX). In July 2012, despite strong resistance from the business lobby, Taiwan's Legislative Yuan passed amendments to introduce a capital gains tax on the sales of securities, effective January 1, 2013. The ratio of the market value of listed companies to GDP was 151.68% in 2012 (latest available data from TAIEX). The market value of listed companies in Taiwan was US\$823 billion as of December 2013. The transaction volume of Taiwan's securities and stock exchange market dropped from the previous year's US\$678.5 billion in 2012 to US\$624.0 billion in 2013, and the turnover rate in transaction volume decreased to 82.64% of 2013 from last year's 97.33%. A wide variety of credit instruments, all allocated on market terms, are available to both domestic- and foreign-invested firms. Legal accounting systems are largely transparent and consistent with international standards. In response to foreign and domestic financial institutions' concerns in recent years about non-transparent transaction reviews by Taiwan's main financial regulatory body, the Financial Supervisory Commission (FSC) has sought to clarify review criteria and enhance transparency through proposed amendments to the *Business Mergers and Acquisitions Act*, currently pending legislative review. Foreign portfolio investors are not subject to foreign ownership limits except in a limited number of industries. As part of the Executive Yuan's Free Economic Pilot Zone (FEPZ) plan, which aims to promote economic liberalization through a graduated process in which regulations are loosened in certain geographical zones and in certain sectors, in late 2013, Taiwan's FSC switched to a negative list approach toward local banks' overseas banking units (OBU) businesses not involving the conversion of the NTD and allowed local securities houses to operate overseas securities units (OSU) businesses.

In recent years, Taiwan authorities have taken steps to encourage a more efficient flow of financial resources and credit. The limit on NTD deposits that a branch of a foreign bank may hold has been lifted. Non-residents are permitted to open NTD bank accounts, though they are subject to capital-flow controls which limit each remittance to US\$100,000. There are no restrictions on residents opening bank accounts overseas. A freeze on new bank branches, designed to encourage consolidation in the banking industry, was removed in 2007, although both foreign and domestic banks still require case-by-case approval to open new branches. In 2013, the FSC lifted a previous requirement that foreign banks merge branch operations into newly opened subsidiaries, thereby allowing them keep both branch and subsidiary operations in Taiwan. Restrictions on capital flows relating to portfolio investment have also been removed. The banking, insurance and securities industries have been liberalized to a certain extent and are open to foreign investment. Since 2012, mainland Chinese banks have been allowed to acquire stakes of Taiwan banks, with a 10% ceiling on total mainland investment in a given Taiwan financial institution. Foreign institutional investors currently are allowed to enter Taiwan's market without restrictions. There is no minimum asset requirement. On-shore foreign investors are subject to annual capital flow limits of US\$5 million for an individual foreign investor and US\$50 million for an unregistered foreign company.

Taiwan has removed legal limits on foreign ownership in most companies listed on the TAIEX, with the exception of public utilities, power distribution, natural gas, postal service, telecommunications, mass media firms, and air and sea transportation industries. There have been no reports of private or official efforts to restrict the participation of foreign-invested firms in industry standards-setting consortia or organizations.

Since the mid-1980s, the financial sector as a whole has been steadily opening to private investment, although Taiwan continues to tightly regulate its banking system. The market share held by foreign banks was relatively small until 5 foreign banks and 3 foreign private equity funds completed their acquisitions of Taiwan banks in 2007 and 2008. Over the past decade, 9 state-owned banks have been privatized. The only Taiwan-based reinsurance company was privatized in 2002. Banks that have some form of state ownership or control, including the 3 remaining banks wholly owned by the state, dominate Taiwan's banking sector and hold a market share of nearly 53.2% as of January 2014.

10. Competition from State Owned Enterprises

Taiwan launched privatization programs in 1989 and succeeded in turning over most of its state-owned enterprises (SOEs) to private industries. As of December 2012, Taiwan authorities still controlled 19 SOEs, including official agencies such as the Central Bank, the Bureau of National Health Insurance, and the Export-Import Bank of the ROC, which have no private-sector competitors.

Progress toward privatizing some of the remaining SOEs has stalled since 2007, largely due to opposition from SOE employees. Currently, there is no timetable for privatizing existing SOEs. While limited in number, some of Taiwan's SOEs are large in scale and exert significant influence in their industries. Examples include monopolies such as Taiwan Power Company (Taipower) and Taiwan Water Co., as well as the island's only aerospace product manufacturer, Aerospace Industrial Development Co. (AIDC), and industry giants Chinese Petroleum Co. (CPC), Taiwan Tobacco & Liquor Co., Chunghwa Post Company, Taiwan

Sugar Co., Taiwan Railways Administration, Taiwan Financial Holdings, and the Taiwan Land Bank. CPC controls over 70% of Taiwan's gasoline retail market. With the exception of the state monopolies, SOEs compete directly with private companies.

SOEs typically have an independent board of directors, and senior management is not required to report directly to a line minister or consult with authorities before making business decisions, except in rare cases. The authorities, however, can appoint officials to serve in a certain number of board member positions.

The Taiwan authorities continue to hold minority shares and exert some control over some former SOEs that have been privatized, including through managing appointments to the board of directors. These enterprises include Chunghwa Telecom, China Steel, Taiwan Fertilizer Co., Taiyen (Taiwan Salt), China Shipbuilding Co., Yang Ming Marine Transportation Co., as well as some financial institutions.

The Bank of Taiwan, one of Taiwan Financial Holdings Group's wholly-owned companies, is the island's largest bank in terms of assets. As of 2013, the Bank of Taiwan and the Land Bank of Taiwan, also wholly owned by Taiwan Financial Holdings, accounted for 17.3% of Taiwan's domestic banks' total assets. Taiwan's ten banks with minority state shares, in addition to Bank of Taiwan and the Land Bank, jointly account for nearly 53.2% of the overall domestic banking assets. Most of these state-affiliated banks are large in scale compared to the purely private financial institutions, and some have been underperforming. In the fourth quarter of 2013, for example, the return on assets (ROA) for Bank of Taiwan was 0.21% lower than the domestic banks' average ROA of 0.67%, according to statistics from the Central Bank.

Taiwan has neither a sovereign wealth fund nor an asset management bureau, but has a Labor Pension Fund Supervisory Committee that oversees a contracted private manager of public pensions.

11. Corporate Social Responsibility

The Taiwan authorities actively promote corporate social responsibility (CSR). MOEA and FSC have issued guidelines on ethical standards and internal control mechanisms in order to help businesses embrace responsibility for the impact of their activities on the environment, consumers, employees, and communities. MOEA maintains an online newsletter to publicize best practices and raise awareness of the latest CSR-related developments in Taiwan and abroad.

At the corporate level, foreign and local enterprises endeavor to follow accepted CSR principles such as those propagated in the Organization for Economic Cooperation and Development's (OECD) Guidelines for Multinational Enterprises. Taiwan businesses, especially high-tech electronics companies, increasingly publish CSR reports. *Global Views Magazine*, one of Taiwan's most influential magazines, annually gives a CSR award to highlight companies that follow internationally accepted CSR standards and adopt transparent, environmentally conscious, and socially responsible practices. The award in 2013 went to domestic (Taiwan) firms Delta Electronics Inc., Taiwan Semiconductor Manufacturing Company Inc.; Lite-On Technology Corporation; E. Sun Financial Holding Co. and Fubon Financial Holding Co; Foreign recipients in 2013 included Intel Inc.; Citibank, HSBC; Hitachi, and IBM.

12. Political Violence

Taiwan is a relatively young and vibrant multi-party democracy. President Ma Ying-jeou's second election victory in 2012 marked another peaceful, democratic transition in Taiwan. There have been no reports of politically motivated damage to foreign investment. In some instances, local and foreign companies have been the target of generally peaceful protests and demonstrations relating to labor disputes and environmental issues.

13. Corruption

Taiwan has implemented laws, regulations, and penalties to combat corruption. The Corruption Punishment Statute and the Criminal Code contain specific penalties for corrupt activities, including maximum jail sentences of life in prison and a maximum fine of up to NT\$100 million (US\$3.3 million). In April 2009, the Legislative Yuan amended the Act for the Punishment of Corruption to bring criminal charges against civil servants who fail to account for abnormal increases in their assets. In July 2011, the administration established the Agency Against Corruption to strengthen efforts to crack down on corruption.

In November 2011, the Legislative Yuan passed amendments to the Anti-Corruption Act that expanded the scope of activities it covered and increased penalties for public officials who fail to explain the origins of suspicious assets or property. Based on the revised act, public servants suspected of corruption are required to declare the origins of their assets if an increase in their assets is disproportionate to an increase in their income in the three years following the allegations. If defendants refuse to offer an explanation, or if the explanation proves to be false and the defendants are found guilty of corruption, they face a jail sentence of up to five years or a fine of no more than the value of the assets of undeclared origin, or both.

The U.S. Government is not aware of cases where bribes have been solicited for foreign investment approval.

Taiwan formally became a member of the WTO Agreement on Government Procurement (GPA) in 2009. The Public Construction Commission (PCC) publishes all state procurement projects that require open bidding, in accordance with WTO transparency requirements. The PCC indicated that in 2011, 2496 contracts were awarded for US\$13.6 billion; 421 of these contracts valued at US\$5.1 billion went to GPA members; U.S. firms were awarded 157 contracts worth US\$326 million. Foreign tenders accounted for over 37% of all state procurement projects awarded in 2011, among which over 16% were awarded to the U.S. bidders in the past year. Government procurement projects open to WTO GPA members had been limited to Kaohsiung and Taipei City municipalities. Following rezoning in 2010 to create five special municipalities -- Taipei City, New Taipei City, Taichung City, Tainan City and Kaohsiung City -- and a revised GPA implemented in December 2011, Taiwan has expanded coverage to the new entities.

The Legislative Yuan in January 2011 passed the following additional amendments to the Government Procurement Act : (1) Procurements of technology, information, and professional services can be based on quality (i.e., the most advantageous bids), rather than price; (2) A GP data bank containing a list of individual prices of awarded construction

tenders exceeding NT\$10 million (US\$331,400); and (3) Procurement agencies are required to use model contracts provided by PCC to reduce potential disputes.

The PCC organizes inspection teams to monitor all public procurement projects both at the central and local levels, and publishes the bidding and inspection results. A task force comprised of PCC staff and independent experts investigates complaints.

The authorities generally investigate allegations of corruption and take action to penalize corrupt officials. From January to October 2012, prosecutors indicted 826 persons on various corruption charges, including 55 senior officials (department director level and above) and 17 elected officials. There were several high-profile corruption cases involving senior officials over the last year. Former Executive Yuan Secretary-General Lin Yi-shih was indicted in October for receiving bribes amounting to NT\$60 million (US\$ 2.1 million), concealing illegal gains and holding unaccountable assets. In December 2012, prosecutors indicted former Director-General of the National Fire Agency Huang chi-min on corruption charges and recommended a life sentence. Huang was accused of taking NT\$19.24 million (US\$662,426) in bribes related to 9 of the agency's major procurement projects. In addition, former chief secretary of the Criminal Investigation Bureau Hsu Jui-shan was indicted in December on several charges including corruption and profiteering. Prosecutors recommended a sentence of 15 years.

Former President Lee Teng-hui was indicted in June 2011 on charges of money laundering and embezzling money from a secret diplomatic fund. Lee made his first court appearance for a pretrial procedure in August. Further pretrial procedures are required before the case goes to trial. In December 2010, former Taiwan president Chen Shui-bian began serving a 17-year jail term after being convicted on corruption and money laundering charges and losing an appeal to the Supreme Court. The Taiwan High Court ruled on November 1, 2012 that Chen should serve 18 years and six months in jail and pay the fine amounting to NT 156 million (US\$5.38 million) for money laundering and corruption in three cases. The High Court also announced on November 5, 2012 that Chen's wife, Wu Shu-chen should serve a sentence of 19 years and two months and pay NT 158 million (US\$5.45 million) fine for money laundering, corruption, influence peddling and perjury in six cases.

Attempting to bribe or accepting a bribe from Taiwan officials constitutes a criminal offense, punishable under the Corruption Punishment Statute and the Criminal Code. The Corruption Punishment Statute also treats payment of a bribe to a foreign official as a crime and makes such a bribe subject to criminal prosecution. The maximum penalty for a public official receiving a bribe is life imprisonment or a maximum fine of NT\$100 million (US\$3.3 million). For those attempting to bribe officials, the maximum penalty is 7 years in prison and a fine of NT\$3 million (US\$99,400). In addition, the offender will be barred from holding public office. The assets obtained from acts of corruption are seized and turned over to either the injured parties or the Treasury.

14. Bilateral Investment Agreements

Taiwan has concluded various forms of investment agreements with the following 31 countries: Argentina, Belize, Burkina Faso, mainland China, Costa Rica, Dominica, El Salvador, Gambia, Guatemala, Honduras, India, Indonesia, Japan, Liberia, Malaysia, Macedonia,

Malawi, the Marshall Islands, Nicaragua, Nigeria, Panama, Paraguay, the Philippines, Saudi Arabia, Senegal, Singapore, St. Vincent, Swaziland, Thailand, the United States, and Vietnam.

The terms of the 1948 Friendship, Commerce, and Navigation Treaty between the Republic of China (Taiwan) and the United States are still in force. Under its terms, U.S. investors are generally accorded national treatment and are provided with a number of protections, including protection against expropriation. Taiwan and the United States also have an agreement pertaining to investment guarantees that serve as the basis for the U.S. Overseas Private Investment Corporation (OPIC) program in Taiwan. The agreement, signed in 1952, is called the "Agreement Dealing with Guaranty of American Investment of Private Capital in Taiwan."

Representatives of the United States and Taiwan signed a Trade and Investment Framework Agreement (TIFA) in 1994 to serve as the basis for consultations on trade and investment issues. After TIFA discussions were suspended in 2007 in response to Taiwan policies affecting U.S. beef imports, the resumption of TIFA talks in 2013 produced numerous results, including new joint statements on investment principles and information and communication technology (ICT) services, and the launch of new TIFA working groups on investment and technical barriers to trade. The April 2014 TIFA Council meeting welcomed steps by Taiwan authorities to improve trade secrets protection, address pharmaceutical issues, clarify investment criteria, lift data localization requirements in the financial sector, and to revise standards affecting U.S. market access, while also highlighting the need for more meaningful progress on long-standing agricultural trade issues and intellectual property protection.

15. OPIC and Other Investment Insurance Programs

OPIC programs are available to U.S. investors, though U.S. investors have never filed an OPIC insurance claim for an investment in Taiwan. Taiwan is not a member of the Multilateral Investment Guaranty Agency.

16. Labor

Benefiting from the recovery following the global financial crisis in 2008 and 2009, Taiwan's unemployment rate continued to decline to 4.18% in 2013, down slightly from 4.24% in the previous year. In the industrial sector, the number of blue-collar foreign workers increased to 278,919 as of 2013. There are no special hiring practices in Taiwan. Employees are typically paid at least a one-month bonus at the end of the lunar calendar year (January or February). Benefits often include meals, transportation, and dormitory housing or related allowances. A standard labor insurance program is mandatory. The program provides paid maternity leave, a lump-sum or annuity retirement plan, and other benefits. A new retirement system implemented in 2005 replaced a voluntary retirement scheme that still covers approximately 30% of the total labor force and, under the standard labor law, permits retirement at age 55 with 15 years of service. Employees hired after July 2005 must join the new system, which sets mandatory retirement at age 65. The new system also requires the employer to contribute six percent of an employee's monthly wage to accounts at designated banking institutions. The accounts follow the employees as they move from one employer to another. A universal national health insurance system, to which employers must contribute, covers all Taiwan residents.

Taiwan provides unemployment relief based on the Employment Insurance Law enacted in 2002. Alternatives for unemployment pay include a vocational training allowance for jobless persons and employment subsidies to encourage the hiring of jobless persons. The Labor Standards Law (LSL) sets a standard eight-hour workday and a biweekly maximum of 84 hours. The public sector and most private firms have a five-day workweek. The LSL restricts child labor and requires employers to provide overtime pay, severance pay, and retirement benefits. The LSL covers both manufacturing and service sectors. Violators are liable to criminal penalties (jail terms) and administrative punishments (fines).

Beginning January 1, 2013, Taiwan's minimum monthly salary increased NT\$267 (or 1.4%) to NT\$19,047 (US\$657 at exchange rate of NT\$29.1 per U.S. dollar), and the minimum hourly wage rose NT\$6 to NT\$109 (US\$3.76). Monthly manufacturing sector wages in the first nine months of 2012 averaged NT\$45,089 (US\$1,554) including overtime, allowances, and bonuses -- a 0.5% increase compared to the same period in 2011.

Labor unions have become more active and independent since Taiwan's martial law was lifted in 1987. Mergers and acquisitions (M&A), factory closures, and the new retirement system contributed to an increased trend in labor disputes over the past decade. Taiwan is not a member of the International Labor Organization (ILO) but adheres to the ILO conventions in the protection of workers' rights.

17. Foreign-Trade Zones/Free Ports

The first free trade/free port zone began operation in 2004 at Keelung, Taiwan's northern port. Another four were established in 2005 at Taoyuan International Airport and the international harbors in Kaohsiung, Taichung, and Taipei. In May 2010, the Executive Yuan approved the establishment of a free-trade zone at the Suao port in northeast Taiwan, making a total of six free trade zones in Taiwan. The Taiwan authorities have relaxed restrictions on the movement of merchandise, capital, and personnel into and out of these zones. Foreign investors located in these areas are accorded national treatment.

As part of a broader restructuring and to increase the competitiveness of Taiwan's ports, the Ministry of Transportation and Communications (MOTC) established the Taiwan International Ports Corp. (TIPC) on March 1, 2012, to manage commercial activities of Taiwan's ports and free trade zones. The TIPC will facilitate cooperation with foreign shipping operations and related businesses.

On December 14, 2012, the Legislative Yuan approved the amendment of the Act for the Establishment and Management of Free Trade Zones, which would exempt London Metal Exchange (LME)-certified non-ferrous metals at Taiwan's free trade zones from income tax through 2042. On June 18, 2013, the LME board approved Kaohsiung Port as a LME delivery port of primary aluminum, aluminum alloy, copper, lead, nickel, tin, and zinc.

The Council for Economic Planning and Development (CEPD) – since January 22, 2014 called the National Development Council (NDC) – launched the first stage of Taiwan's free economic pilot zones (FEPZ) project in August 2013, to be implemented in Taipei Port, Keelung Port, Suao Port, Taichung Port, Anping Port, Kaohsiung Port, Taoyuan Airport, and Pintung Agriculture Biotechnology Park. According to NDC, the goal of building up these zones is to position Taiwan as an "Asia-Pacific Free Trade Center", with each zone including

one or more of the following regional centers: (1) a medical center for severe diseases and medical tourism; (2) an innovation and integration center for industries; (3) a logistics center; (4) a personnel training center; and (5) an agricultural transportation and sales center. Greater Kaohsiung was targeted as the first FEPZ, after which any city or county administration could apply to establish additional zones. The FEPZ are expected to ease restrictions on labor recruitment, cash flow, land acquisition and market access for operations set up within the zones. On December 26, 2013, the Executive Yuan (EY), Taiwan's cabinet, forwarded legislation implementing an expanded phase two of the FEPZs to the Legislative Yuan for ratification. As of late April 2014, the proposal was still under legislative review.

18. Foreign Direct Investment Statistics and Foreign Portfolio Investment Statistics

Statistics on foreign direct investment (FDI) in Taiwan are available from two official sources: the IC and the Central Bank (CBT). The IC publishes monthly and yearly foreign investment approval statistics by industry and by country. While these statistics do not correspond exactly to actual commitments of investment funds, AIT believes these data serve as a good proxy. CBT publishes foreign direct investment arrivals on a quarterly and yearly basis. CBT data contained in balance-of-payments (BOP) statistics are not classified by industry or country.

At the end of 2013, Taiwan's total stock of foreign direct investment stood at US\$126.38 billion (valued at historical cost). This represents about 25.8% of Taiwan's 2013 GDP. Total FDI inflows in 2013, based on approvals, stood at US\$4.9 billion, or about 1% of 2013 GDP. As of December 2013, Taiwan's foreign exchange reserves amounted to US\$416.8 billion, the fourth-largest in the world.

Taiwan's strong reliance on exports has exposed the economy to fluctuations in global demand. Taiwan authorities' official GDP growth forecasts for 2013 were successively revised downward due to the unexpected contractions in its export sector. The GDP growth rate in 2013 was 2.11%, much lower than the official statistical agency's early estimate of 3.59%. Inbound foreign direct investment approved in 2013 declined by 11.3% year-on-year.

In recent years, foreign direct investment has shifted from capital-intensive high-tech industries to investments in the financial service sector. Approved direct investment in electronics industries (including electronic parts and components, computers, communications, semiconductor, TFT-LCD and other optical electronic products), which peaked at 48.2% as a percentage of FDI in 2006, declined steadily to 19.5% by 2013, and nearly 83% of approved inbound direct investment in Taiwan's electronics industries in 2013 came from the European Union, the United States, Singapore, and the British Territories in North America (BTA). Nearly 79% of approved inbound direct investment in the financial and insurance sectors came from Australia, Samoa, the United States, Hong Kong, Germany, and the BTA.

According to official Taiwan statistics, approvals for U.S. investment from 1952 to 2013 totaled US\$23.4 billion (US\$16.5 billion as of 2012, according to official U.S. figures), or 18.5% of total foreign investment. These aggregate figures of investment stock are valued at historical cost. In 2013, 39.4% of U.S. total investments in Taiwan went to the service sector. Taiwan data on U.S. FDI has diverged from U.S. figures since 2010, as Taiwan statistics reflect approved

investment amounts rather than actual commitment or divestment of funds. Approvals for Japanese investment from 1952 to 2013 amounted to US\$17.7 billion, or 14.0% of total foreign investment.

As the tables below indicate, significant FDI now flows from the tax havens of the BTA, which harbor a growing number of multinational corporations, including those with Taiwan shareholders. For 2013, 54.1% of the investment from the BTA was directed towards financial services, real estate and wholesale and retail trade industries.

As a relatively open and liberal economy, Taiwan not only benefits from substantial foreign investment but also has significant investments overseas. According to balance-of-payments statistics compiled by the Central Bank, outbound direct investment has exceeded inbound direct investment every year since 1988. According to IC statistics, by 2013, cumulative approvals for outbound investments totaled US\$213.2 billion. The main recipient has been mainland China, which has received nearly 62.7% of Taiwan's outbound investment. Approved investments to mainland China have declined since 2012 after hitting a peak in 2011. As of 2013, Taiwan firms hold investments estimated in excess of US\$133.7 billion on the mainland, though some other estimates suggest the figures could be from US\$150 billion to US\$300 billion.

Taiwan business firms have been relocating their production bases to mainland China since the late 1980s. The WTO accessions of mainland China and Taiwan in 2002 prompted Taiwan firms to accelerate this relocation to sharpen their competitive edge in exports. Taiwan factories based in mainland China avail of low labor and land costs to process Taiwan-made production inputs into finished goods for exports to such industrial markets as the United States, Japan and Europe, and also for final sale in mainland China. Recently however, rising labor and land costs on the mainland have prompted some Taiwan firms to move production to economies in South and Southeast Asia, including Vietnam. Many Taiwan firms have also shifted to producing higher value-added goods and higher-tech products in mainland China.

Following decisions by some Taiwan investors to relocate production lines outside of mainland China, Taiwan's annual registered direct investment across the Taiwan Strait declined from its recent peak of US \$13.1 billion in 2011 to US\$8.69 million in 2013. However, the overseas production ratio for orders received by Taiwan exporters remained at a relatively high level of 51.5% in 2013, up from 11.5% in early 2000. The ratio reached a record high of 87.3% for information technology (IT) firms in 2013. Mainland China, including Hong Kong, has replaced the United States as Taiwan's largest export market since 2001, and its share of Taiwan's exports in 2013 was down from its recent peak of 41.8% in 2010 to 39.7%, compared to 10.2% for the United States and 9.3% for the European Union in 2013.

Table 2: Inward Foreign Investment Approvals by Year and by Area (1952-2013)

(Unit: US\$ million)

Year	U.S.A.	Japan	BTA*	Europe	Hong Kong	Others	Total
1952-89	3,067	2,983	341	1,312	1,198	2,049	10,950
1990	581	839	66	283	236	297	2,302
1991	612	535	60	165	129	277	1,778
1992	220	421	37	165	213	405	1,461

Section 5 - Government

Chiefs of State and Cabinet Members:

For the current list of Chief of State and Cabinet Members, please access the following - [Central Intelligence Agency online directory of Chiefs of State and Cabinet Members of Foreign Governments](#)

Legal system:

civil law system

International organization participation:

ADB, APEC, BCIE, ICC (national committees), IOC, ITUC (NGOs), WTO

Section 6 - Tax

Exchange control

At present there is no limit on genuine trade-related remittances whether inward or outward. For non-trade-related remittances, the long standing controls were relaxed from 1997. Business entities can remit up to US\$50,000,000 (or the equivalent) into or out of Taiwan each year without advance approval from Central Bank. The limit for individuals remains unchanged at US\$5,000,000 per year. Each remittance in excess of US\$1,000,000 for a corporate or US\$500,000 for an individual requires supporting documentation.

Treaty and non-treaty withholding tax rates

The following withholding tax rates are applicable to Taiwanese-source dividends, interest and royalties paid to non-residents where the income is not connected with a permanent establishment in Taiwan.

	<i>Dividends</i>	<i>Interest</i>	<i>Royalties</i>
	(%)	(%)	(%)
Non-treaty countries:	20	15,20	20
Treaty countries:			
Australia	10,15	10	12.5
Belgium	10	10	10
Denmark	10	10	10
France	10	10	10
Gambia	10	10	10
Germany	10	10,15	10
Hungary	10	10	10
India	12.5	10	10
Indonesia	10	10	10
Israel	10	7,10	10
Macedonia	10	10	10
Malaysia	12.5	10	10
New Zealand	15	10	10
The Netherlands	10	10	10
Paraguay	5	10	10
Senegal	10	15	12.5
Singapore	1	2	15
Slovakia	10	10	5,10
South Africa	5,15	10	10

	<i>Dividends</i>	<i>Interest</i>	<i>Royalties</i>
	(%)	(%)	(%)
Swaziland	10	10	10
Sweden	10	10	10
Switzerland	10,15	10	10
Thailand	5,10	10,15	10
United Kingdom	10	10	10
Vietnam	15	10	15
